

Deo Plus⁺ Directions & Household use information. Following this guide closely will allow you to understand how the product works and how much you need.

Product Label Directions:

Dispense directly on the source of odor. Repeat application as necessary. Amount needed may vary with type and source of odor. If using on fabrics, carpeting or upholstery, test a small hidden area prior to use.

Additional Information- (need more specifics...)

You must *identify the source of the odor* because that is what you want to treat. This is not a perfume! Deo Plus⁺ is a very effective direct contact means of eliminating odors. When you treat the source of the odor the intent is to remove the odor, not to introduce any new fragrance(s). By design, Deo Plus⁺ has no significant odor, we thought this would be the best way to prove that it works. Although a light fragrance might be pleasant, it would be difficult to determine if the product worked and we would be just like everyone else. We find that everyone likes different fragrances and most artificially provided fragrances are also unpleasant. We will let you introduce your own fragrance if you so desire and we will deal with the odor.

For best results, cover most of the surface area to be treated. It is better to cover more area with less quantity than to dump it all on one place, (see below for approximate application rates). If the area to be treated is wet, best to drain or dump liquid before treating. If it is not possible to dump or drain liquid, more Deo Plus⁺ may be needed to eliminate the odor. In most cases immediate results are noticeable. For areas that are extremely wet and very obnoxious more product will be needed, (dumpsters/waste barrels that have a substantial build up of matter on the sides and bottom). In these extreme cases Deo Plus⁺ will eliminate enough or the entire odor problem with repetitive treatments. For some applications with hard to reach areas or extensive vertical surfaces, Deo Plus⁺ can be used in conjunction with Kappauno, (the liquid version). It is ok to mix the two as they are made from the same base material. Think of Deo Plus⁺ as a concentrated dry version of Kappauno. It is preferred over Kappauno when the introduction of moisture is undesirable or if the odor is extreme. In applications where flies exist, the consistent ongoing use of Deo Plus⁺ will reduce the fly population overtime. In effect, Deo Plus⁺ is eliminating the source of the odor not just the odor. It is loaded with enzymes that are natural catalysts for breaking down the pathogenic bacteria and elimination of the odor is a result of this process.

Common uses and application rates/methods:

- Shoes/sneaker/boots that smell-sprinkle ½ ounce evenly over the surface
- Small piles of manure/waste/litter-sprinkle enough to lightly and evenly cover the surface area
- Trash cans-try sprinkling enough on the bottom of the container and sides if possible or use Kappauno, (the liquid product) to treat all inside vertical surfaces. For most domestic trash cans 5-6 squirts of Kappauno may be more effective and don't forget to spray underneath the inside cover if there is one. Spray the outside of the can if it is real dirty, that may be the source of odor as well.
- Barrels with yard waste- sprinkle enough to lightly and evenly cover all of the exposed surface area
- Decaying animals-normally remove, but to knock out the smell until removed or to treat area where animal was after removal, sprinkle enough to lightly and evenly cover the surface area
- Automobile and Household Rugs/Carpets - sprinkle enough to lightly and evenly cover the surface area, also try Kappauno, spraying lightly enough to avoid soaking area but adequately cover the area.
- Animal/pet urine-sprinkle enough to lightly and evenly cover the surface area
- Skunk smells, although Deo Plus⁺ is effective at removing skunk spray on surface areas, it is more practical to use Kappauno to spray the general area, since you can not specifically see how big of an area got hit.
- Overall uses-, if you have a source of odor and you can get access to the area enough to cover the surface area that smells you should find immediate results and/or complete elimination of odor.

Caution Deo Plus+ is all natural, safe to handle and use but as always *keep out of reach of children and use as directed*. In case of contact with eyes flush with water. If swallowed or irritation occurs, seek medical attention. Refer to MSDS sheets available on the website www.terrasolutions.net for more specific information.
